#### DESCRIPTION

The Gammec GP3 is a gaming mouse with 7 keys, backlit and with A704 chip programmable with the appropriate software downloadable from the Gammec website.

The metal base, the gold colored wheel and the various top and side openings that let the backlight pass, give a very refined look to the GP3.

The software allows you to have 5 profiles + import / export, to set several functions: Fire, Office, Windows, Multimedia, Macro and to have loop or fixed lighting functions.

The DPI settings are with backlit key on 4 levels selectable between 1200-1600-2000-2400-3200 which can be combined with lighting in different colors.

The materials, the rubber-coated coating, the backlit laser logo and the central wheel are also excellent.
