**ALANTIK MICROATX 200W POWER SUPPLY**

**DESCRIPTION**

The Alantik PM201A is a 200 watt SFX power supply. It is equipped with an 8cm fan for cooling and a power switch. Given the small size it is to be used in those cases where there is not enough space for an ATX power supply, like some small MicroATX cases. The real power of 200 watts is more than enough to power a computer in a standard office or home use configuration.
